**PARE ENGINEERING CORPORATION UNVEILS NEW NAME –
PARE CORPORATION**

LINCOLN, RI—Pare Corporation (PARE), a leading multi-disciplinary engineering, planning, and natural science firm, today announced the changing of its name from Pare Engineering Corporation to Pare Corporation.

Larry Riggs, PARE's President, explained that the name change had been under consideration for some time. "While engineering is still our primary service, Pare Corporation has evolved to address much more than the engineering design needs of our clients. In the past ten years, we have made a number of strategic staff additions and technology investments in order to better match the needs of our clients. Professional planners, environmental and wetland scientists, GIS and CAD specialists, regulatory permitting specialists, laboratory technicians, and resident engineers allow PARE to address the diverse needs of our clients in these days of complex regulatory oversight, shorter project schedules and tighter budgets. I guess you could say this is a case of 'less is more.' Our name may be getting shorter, but our capabilities—and our ability to provide unsurpassed service—just keeps growing."

Established in 1970, PARE's 75-person staff provides comprehensive planning, engineering, permitting, and construction-phase services throughout the Northeastern United States. Working for a wide array of public and private sector clients, PARE offers special expertise in the areas of site/civil, land development, geotechnical, structural, highways, bridges, water/wastewater, dams, waterfront/marine, municipal and environmental engineering. PARE operates from a full-service office in Foxboro, Massachusetts, and from its headquarters in Lincoln, Rhode Island.
